

Aromatherapy and Massage

Karrie Osborn

Aromatherapy, a process utilizing the purest essence of a plant, is a 4,000-year-old technique that has enhanced the health of everyone from modern-day pop divas to the scholars of ancient Greece. The art of massage has its own deeply rich roots, with even Plato and Socrates touting the value of hands-on bodywork for good health.

Separately, these two therapeutic traditions hold individual prowess in the realm of personal health and well-being. Together, however, they become a formidable health alliance that can address not only a person's physical health, but the health of the mind and spirit as well.

Let's see how it works. Essential oils are extracted from herbs, flowers, and plants with the intent to improve a person's health and well-being. Addressing everything from arthritis to whooping cough, effects of the approximate 3,000 oils found globally can range from sedative to stimulating and antibacterial to antispasmodic. The benefits derived from aromatherapy during a massage come in part from the contact the essential oil has on our skin, but even more so how it affects us when it's inhaled and absorbed through the soft-tissue linings of our nose and mouth.

The scientific explanation suggests that the essential oil's molecules, when

*When we are
unable to find
tranquility
within
ourselves, it is
useless to seek
it elsewhere.*

-La Rochefoucauld

What essential oil is your favorite?

A Natural Complement

Our senses were designed to work best in conjunction with one another. Our sense of taste would not be as acute without our nose lending its support to the process. Our auditory senses might seem hollow if we weren't gifted with sight as well. Indeed, there exists a quiet partnership between all our five senses that's built on synergy.

inhaled, lock onto receptor cells at the back of the nose, sending an electrochemical message to the brain's limbic system. This message appears to trigger memory and emotional responses, causing messages to be sent to other parts of the brain and body. "In this way," says aromatherapist Danila

Mansfield, "the production of euphoric, relaxing, sedative, or stimulating neurochemicals is stimulated."

Judith Fitzsimmons and Paula Bousquet, authors of *Aromatherapy Through the Seasons*, say the use of essential oils creates a multifaceted effect: "The real beauty of aromatherapy is that it works on a cellular and physical level and also in the emotional, intellectual, spiritual, and aesthetic areas of your life."

It's really quite amazing when you think about it. Imagine an area the size of a small apricot pit, a 1-inch square area, filled with millions of sensory neurons that can capture, process, and store 10,000 odors. This is our olfactory system at work, and part of its job is to create a personal history for us based on scent, says clinical aromatherapist Ava-Marie Lind-Shiveley. "None of our other senses so well establishes a memory database." She says our response to scent is both physiological and psychosomatic. "Within an instant of smelling an aroma, we can be sent back to the first moment we were introduced to it."

By enabling us to recognize, revisit, and/or reclaim these various emotions and memories, aromatherapy allows another avenue of access for healing during a bodywork session. It creates a path through which the somatic experience can find its full strength.

When the powerful effects of aromatherapy are combined with massage, it can take us to another level, say aromatherapy educators Shirley and Len Price. "When, during a massage, the touch of the therapist is combined with the mental and physical effects of the essential oils, the client is helped to achieve a temporary separation from worldly worries, somewhat akin to a meditative state." Helping clients reach this level of relaxation is a primary goal of massage therapists and aromatherapists alike, so it makes sense that a partnership could beautifully exist.

A Scent Journey

"Scent is not simplistic," Lind-Shiveley says. "It is voluminous." She illustrates this point with a quote from Helen Keller: "Smell is a potent wizard that transports us across thousands of miles

and all the years we have lived. The odors of fruits waft me to my Southern home, to my childhood frolics in the peach orchard. Other odors, instantaneous and fleeting, cause my heart to dilate joyously or contract with remembered grief."

If you decide to do some personal exploration into the world of scent therapy, proceed with due caution in both the quality of the oils you buy and how you dose and administer them. There is a dichotic nature inherent in aromatherapy. It is gentle, yet powerful; subtle, yet intense. There are essential oils strong enough to cause miscarriage, but there also are many oils safe enough to use on infants. The key is knowing how to utilize nature's gifts to provide the best, most effective therapeutic collaboration possible. Talk with your massage therapist about incorporating the science of aromatherapy into your

sessions or ask about a referral to an aromatherapist in your area.

BALANCING

Bay Laurel, Cedarwood, Geranium

CLARIFYING

Juniper, Lemon, Peppermint

COMFORTING

Bergamot, Frankincense, Rose

ENERGIZING

Eucalyptus, Grapefruit, Rosemary

FOCUSING

Angelica, Sweet Basil, Lime

SEDATING

Chamomile, Clary Sage, Patchouli

UPLIFTING

Lavender, Orange/Mandarin, Pine, Tea Tree

Aromatherapy has roots in ancient cultures.

Footprints for Health

You walk on them all day, but did you know your feet do more than carry you from one place to the next? They also have a unique connection to balanced health and well-being. In a form of bodywork known as reflexology, the feet are said to contain reflex areas that mirror and connect to all parts of the body--and pressure on these points can actually influence your state of health.

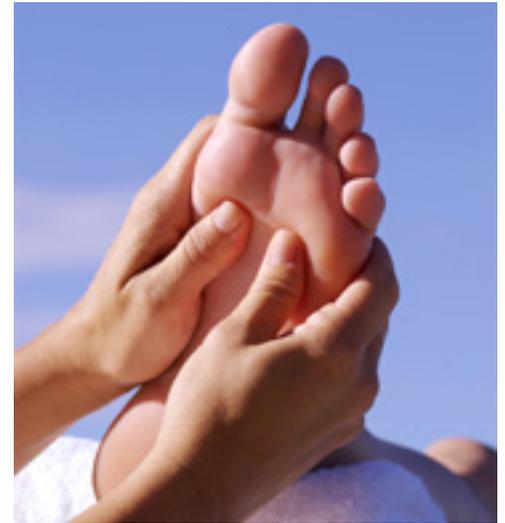

Reflexology is viewed primarily as a stress reduction or relaxation technique. Using the thumb, finger, and hand, gentle pressure is applied to reflex areas of the feet in order to decrease stress and bring the body into equilibrium.

Although simplistic in application, the effects of the treatment can be profound. Through activation of nerve receptors in the hands and feet, new messages flood into the body system, changing its tempo and tone. In essence, the foot or hand becomes a conduit for sharing information throughout the body. Function in the connecting area is

improved and, at the same time, the body experiences overall relaxation and benefits to the circulation and elimination systems. When the body's systems are at optimal functioning, self-healing is enhanced.

Scientific studies have documented the benefits of reflexology for a variety of ailments, ranging from reduction of pain, improvement in circulation, and release of tension, to improved effectiveness of medication, as well as benefits for diabetes and headaches.

In this sense, reflexology is not a medical treatment for specific symptoms or diseases, but rather a way to facilitate the body's inherent healing power.

Treat your feet, and body, to reflexology.

Hot or Cold for Injuries?

How to Know Which is Best for You

Art Riggs

We all know that treating an injury immediately after it happens can help minimize the pain and damage as well as facilitate recovery. But after rolling your ankle in a soccer game, or hurting your back when lifting your toddler, or tweaking your knee when stepping out of your car, what's best? Should you ice it to try to control inflammation, or would heat be better to promote circulation?

While it's difficult to establish a fail-safe rule for when to apply ice or heat, the general directive is to use ice for the first forty-eight to seventy-two hours after an acute injury and then switch to heat.

It Depends

The reality is that many conditions are not necessarily the result of a specific injury. I call these conditions "recurrent acute" and find them by far the most

common: sciatica that occurs when you drive a car; a back that flares up every time you garden; or tennis elbow from intense computer work. In these cases, consistent and frequent applications of ice may prove very helpful over long periods of time, particularly immediately after experiencing the event that causes problems.

Conversely, back or other muscle spasms caused by overexertion rather than injury may benefit greatly from heat immediately upon the onset of symptoms or immediately after exercise in order to relax the muscles and increase circulation. Also, muscle belly pain not resulting from acute and serious trauma generally responds well to heat, which can break the spasms and release the strain. On the other hand, nerve and tendon pain--regardless of

the duration of symptoms, even if you've been experiencing them for months--benefit from ice.

What Works for You

The bottom line: different individuals will constitutionally vary greatly in their reactions. Some people are more prone to the types of inflammation exacerbated by heat, while others find their bodies contracting and tightening at the mere mention of ice. Try each option and pay close attention to how your body and mind respond, and let your gut be your guide. Ultimately, what works best for you is, well, what's best for you.

*Keeping your
body healthy is
an expression of
gratitude to the
whole cosmos –
the trees, the
clouds,
everything.*
